

# Join the Knowledge Metaverse Programme National Rollout

***The merSETA and EON Reality have joined together in the EON Knowledge Metaverse (EKM) Programme for an easy to use XR education and training solution in South Africa.***

The merSETA and EON Reality are partnering in rolling out in South Africa the EON Knowledge Metaverse (EKM) Program, an easy to use XR education and training solution. The rollout includes a total of 50,000 learners and 7,500 intern/worker licenses. The EON Knowledge Metaverse Project is an all-encompassing global project to build a new and improved interconnected world for users to learn, train and perform using XR. By bringing the knowledge metaverse to life, EON-XR platform is merging the physical, virtual and augmented reality worlds to reshape the way people everywhere experience their realities.

EON-XR contains the backend support and architecture that large organisations need to build, deploy and scale AR and VR applications to supplement their current training and productivity efforts quickly and efficiently. Physical objects and spaces are injected with informational annotations, activities, assessments and other enhanced knowledge points through AR, while users in VR can digitally teleport themselves into real-life settings around the world.

Access to EON-XR solutions will enable trainers, educators and supervisors at merSETA-affiliated companies, skills development providers, and education institutions to increase the speed of employee training, reduce infrastructure costs and decrease the probability of high-consequence events in dangerous industries through simulation-based training.
